4. Working script = PlayerMovement.cs – controls the main character using arrow keys and WASD
5. Names of files describe the results they provide
6. Gena- sprite animations and collision  
Matt – Environment art  
Justin – player movement script  
Elijah – camera and camera movement with player  
Will – sound effects and music
7. Collision objects in dummy and on skeleton (in pictures below)

8. The first image shows the camera moving with the player, the animated skeleton, and the player colliding with the dummy and skeleton

9.

10. The environment is natural, much like medieval times. The camera is focused on the main character, which immerses the player. The sprites are of a medieval practice dummy and a skeleton, which will be an enemy in the future. The audio is of footsteps on a natural flooring, and medieval-style music. The environment, sounds, and sprites and the player's attire all fit into the theme of medieval fantasy.
